

Powder coating set with head-up transport system

According to your workshop space and your products details To choose the design that will meet your requirement!

Automatic Powder Application Powder coating line with one booth, typical equipment used on large series in one color.

Powder Coating Line with DIP-Pre-treatment

The coating line is equipped with two moveable spray-booths. Allows easy and fast color changes. Curing is done in tunnel oven. Pre-treatment by dip immersion; chromating and/or phosphating process is usually employed. Typical coating line when coating long items, i.e. extrusions or larger sheets.

**Typical Layout Plan for Vertical Powder coating line**

- 1.Loading area for the workpiece need to be coated
- 2.Vertical spray shower type pretreatment system
- 3.Drying off oven
- 4.Powder spray booth
- 5.Curing oven
- 6.Unloading area for finished workpiece
